

Custom Blocks in New Block Editor

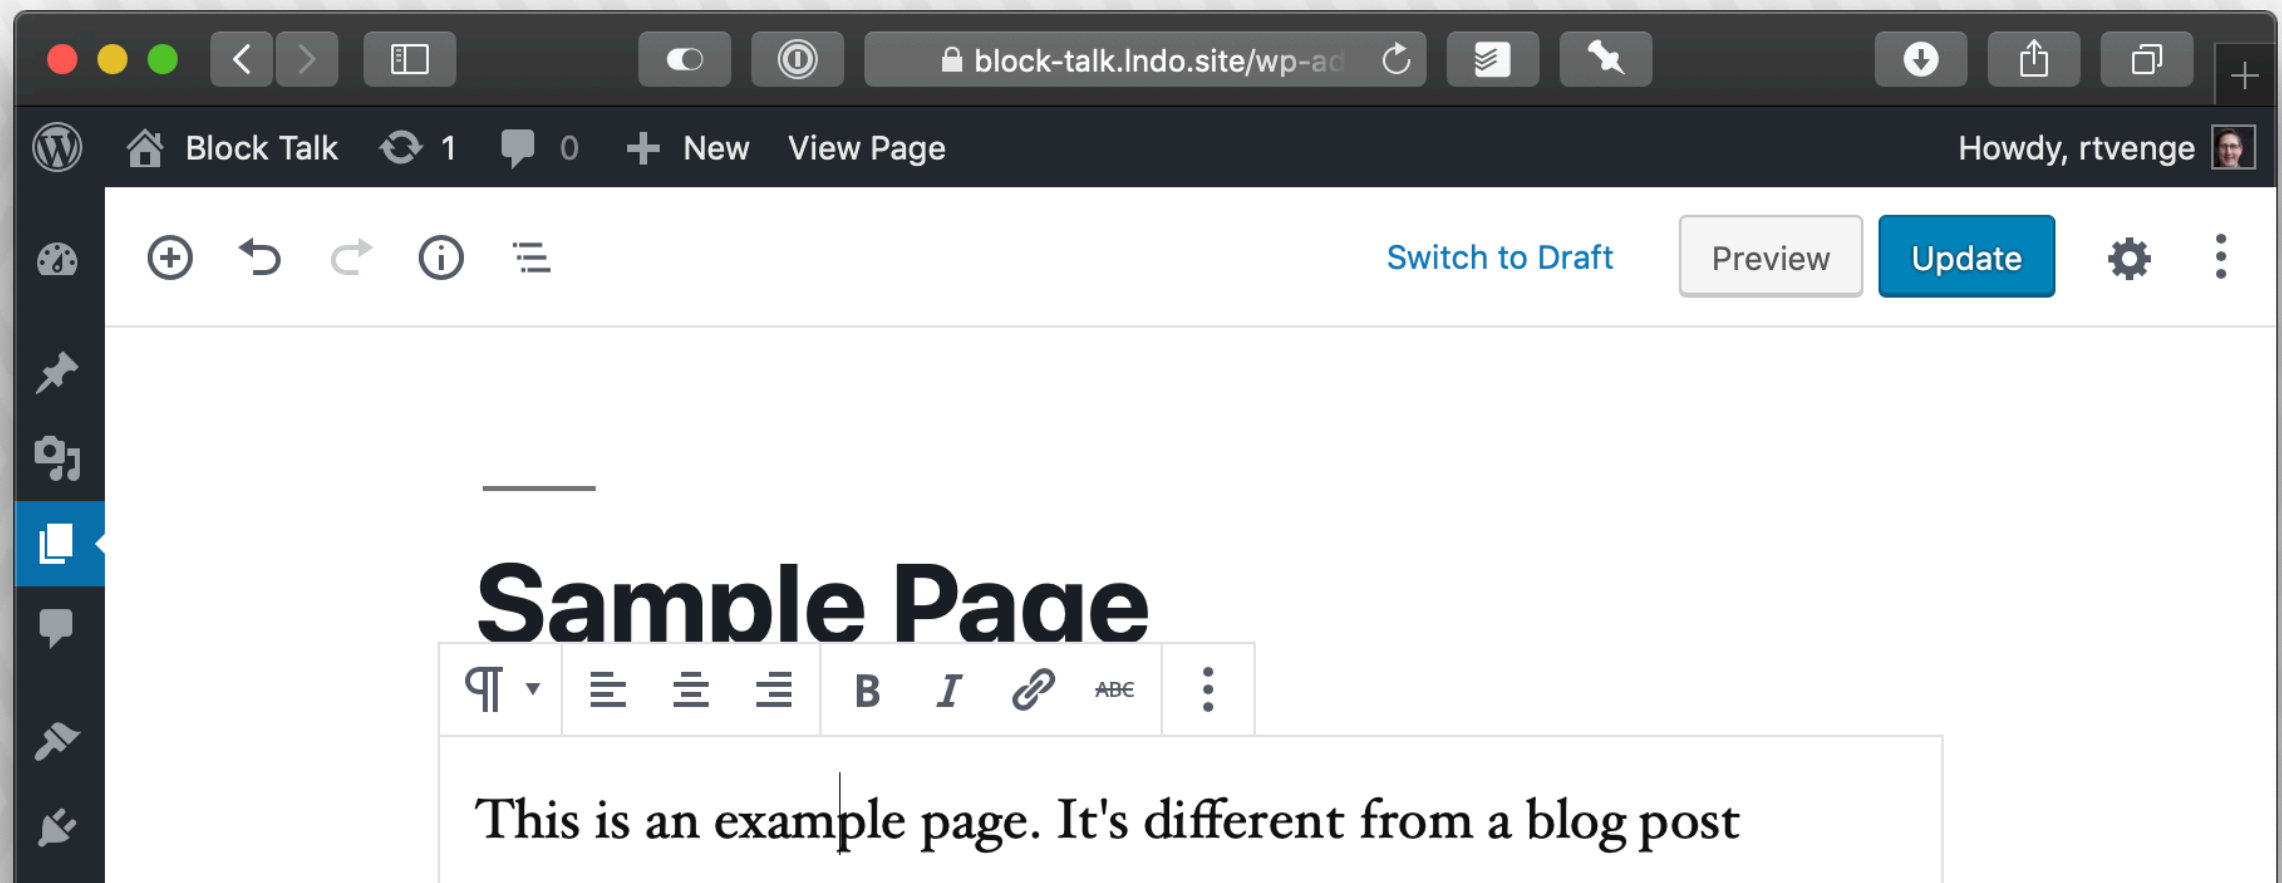

Ryan Tvenge
April 10, 2019

WordPress Block Editor

WordPress Block Editor

- Previously known as “Gutenberg”
- More than a tube of content
- Other CMS’s have had this for a while

Pro Tip: Slash Shortcut

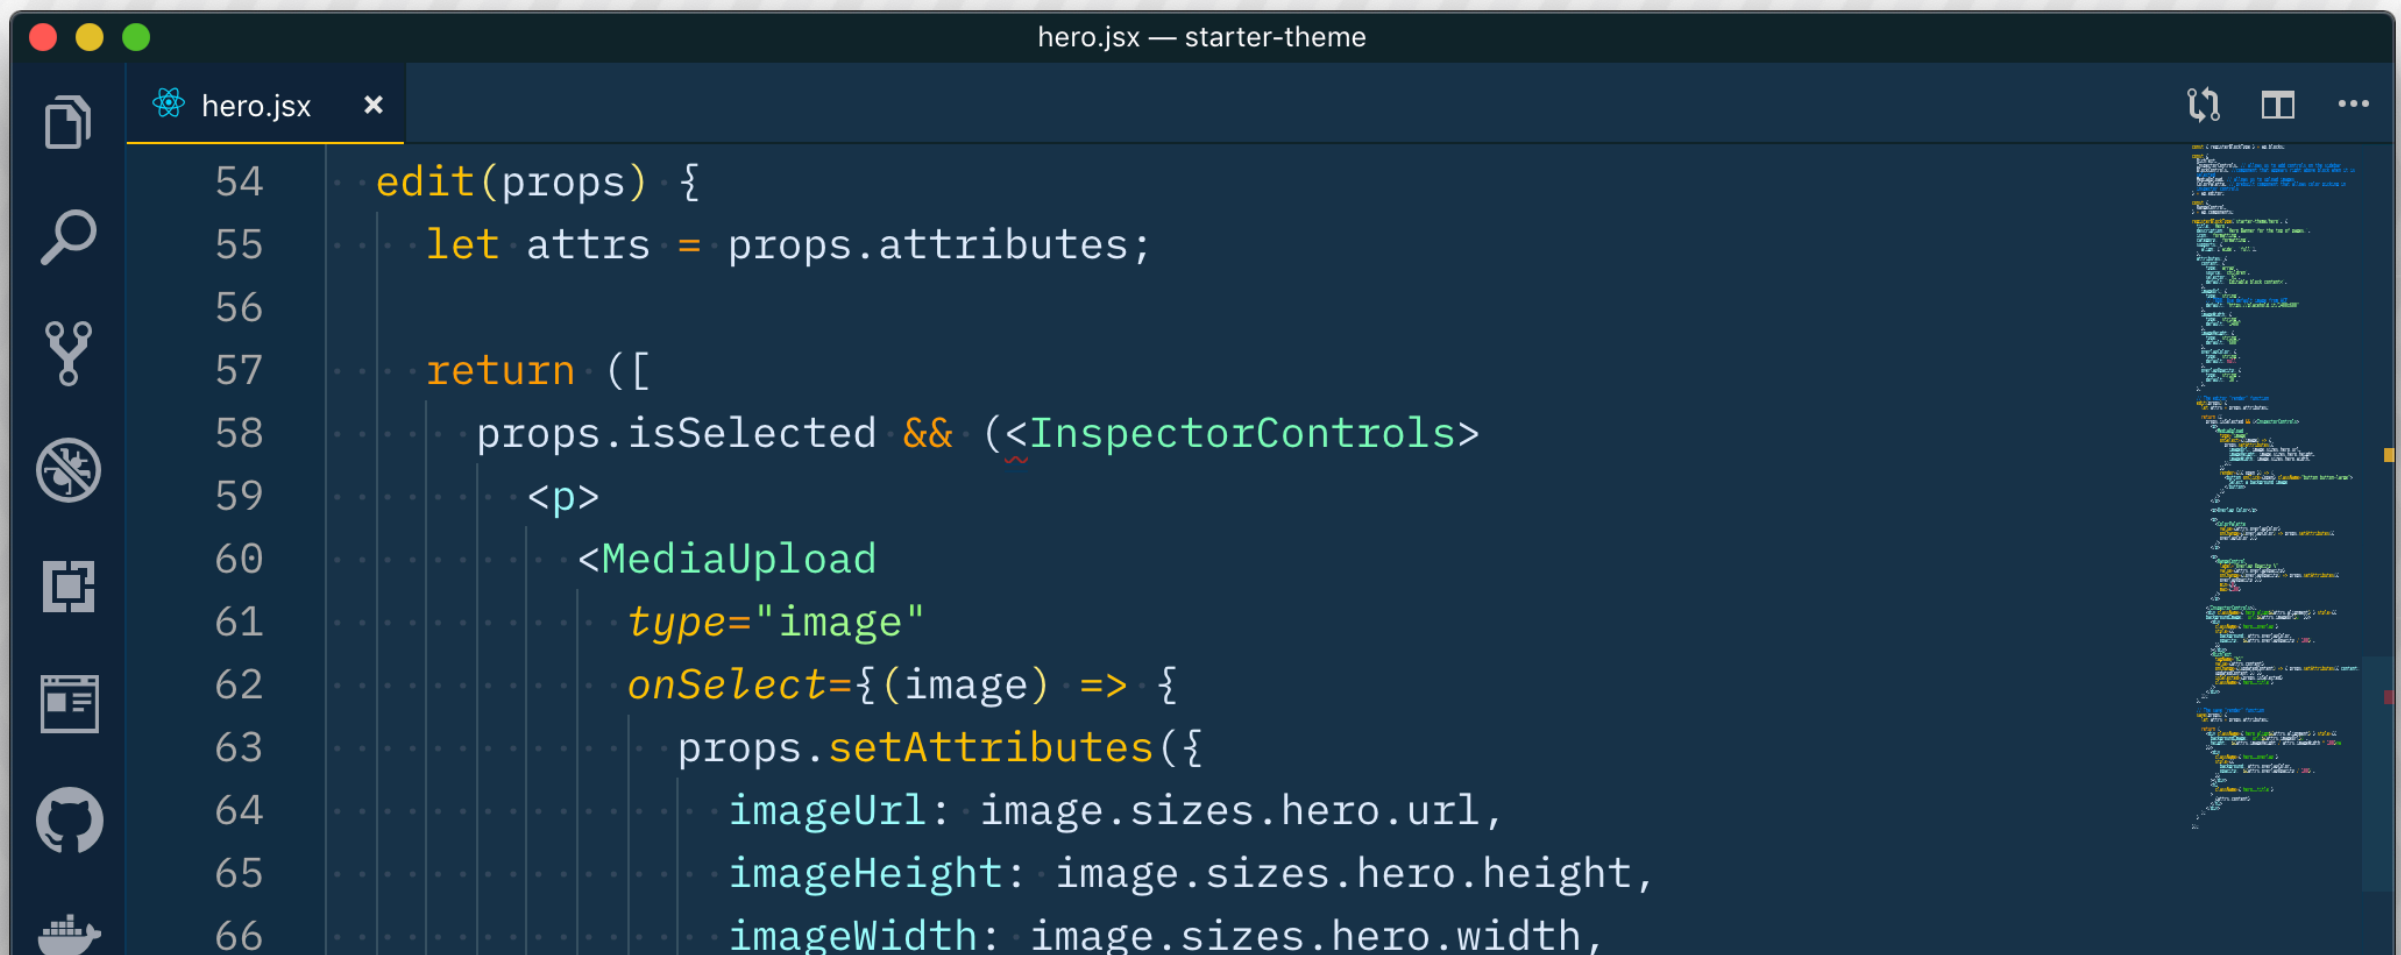

Sample Page

As a new WordPress user, you should go to [your dashboard](#) to delete this page and create new pages for your content. Have fun!

I have to learn React now?

- Matt said in 2015 to “Learn JavaScript”
- Do I have to learn another language/framework? 😡

```
hero.jsx — starter-theme
54 edit(props) {
55   let attrs = props.attributes;
56
57   return ([
58     props.isSelected && (<InspectorControls>
59       <p>
60         <MediaUpload
61           type="image"
62           onSelect={image => {
63             props.setAttributes({
64               imageUrl: image.sizes.hero.url,
65               imageHeight: image.sizes.hero.height,
66               imageWidth: image.sizes.hero.width,
```

ACF Blocks

- ACF 5.8 Free/Pro to include ACF Blocks
- No need to learn JavaScript/React
- Register a block with **acf_register_block()**
- Views work in regular PHP

acf_register_block()

```
acf_register_block([  
    'name' => 'bt-testimonial',  
    'title' => __('Testimonial'),  
    'description' => __('Block showing client  
testimonial with image.'),  
    'render_template' => 'path/to/include.php',  
    'category' => 'layout',  
    'icon' => 'format-quote',  
    'keywords' => ['quote', 'testimonial'],  
]);
```

Demo: What we are creating

1. A child theme to twentynineteen
2. Register a custom block for a Hero
3. Create html/css for block
4. Create fields for edit-ability

Location

Rules

Create a set of rules to determine which edit screens will use these advanced custom fields

Show this field group if

Block

is equal to

Hero

and

or

Add rule group

Let's code up a block!

  Demo Time!
